Your Sister  
Mary

MORRIS HIGH SCHOOL  
BRONX, NEW YORK

The Morris High School 1897-1905

## The Morris High School 1897-1905

EIGHT years ago, in September, 1897, what is now The Morris High School had its humble beginning, together with its sister school, Wadleigh, and its brother school, DeWitt Clinton. It occupied the building at 157th Street and Third Avenue, and was then known as the Mixed High School. The small brick building obtained for the school was an old structure that had served many purposes. It had been previous to our entrance, a public school, a factory, and a street-cleaning department building. Because of the proximity of the elevated trains and surface cars, study naturally had its disadvantages here.

The building had twenty-three rooms, which were but poorly adapted for the purpose they were put to. It also had a small gymnasium fairly well equipped, but with no lockers or baths. The ceiling was very low and in the summer time Mr. Skeele made it the custom to exercise in the yard for want of proper room and ventilation. This building, which was known to all pupils of Morris as the "main building," was familiarly called the "barn" or "shanty" by some. This was the beginning of the school that everyone is proud of to-day.

The staff of teachers called to the work of teaching here, found themselves under the supervision of Dr. E. J. Goodwin, of Newton, Mass., and an efficient leader he proved to be. Too much cannot be said of the work of the instructors behind him, most of whom are still with us.

In 1898 the school had grown so that it was found necessary to open an annex. This annex, situated at 173d Street and Third Avenue, was given over to commercial classes. Mr. E. W. Sampson, one of Dr. Goodwin's most valued friends and helpers, who came from Newton with Dr. Goodwin, was placed in charge of this annex. Mr. Sampson, a graduate of Bridgewater Normal School, had previously taught in Baltimore, St. Louis, and Newton. He was well acquainted with Dr. Goodwin, knew the latter's

The Morris High School 1897-1903

THE AUDITORIUM

intentions and proposed methods of work in the High School for Boys and Girls, as the school was now known, and carried these out in his able management of the annex.

So rapid was the growth of the school, that in 1899 another annex was opened at 144th Street and Mott Avenue. Mr. Sampson took charge of this and was succeeded at 173d Street by Dr. Frank Rollins. At Mott Avenue, the High School, now the Peter Cooper, occupied the two upper floors, and the remainder of the building was given over to primary classes.

In 1900 the first class of graduates held their exercises at 59th Street and Park Avenue in the Hall of the Board of Education. In this first class there were two divisions: the three year course with thirty-four graduates, and the four year with eight.

So under the disadvantages certain to arise in a school separated as Morris was, (it became Morris in 1901,) the work went on and class after class graduated. Athletics had a great drawback in

The Morris High School 1897-1903

THE LABORATORY

the difficulty of meeting in one place for practice. But it was rumored that we were to have a new building large enough for us all. This seemed to be merely a rumor for year after year passed without our getting it. But it was in the course of construction. Plans had been accepted and a lot purchased in 1900. The corner stone was laid on July 23, 1902, without much ceremony, and work commenced in earnest. The first plans were for a large building, then these were cut down, but finally the original plans were adopted and the school building was built as we now have it.

In January, 1904, all classes were ordered to report at 166th Street and Boston Road, and the last week in January saw us installed in the new building. Of course, it was not entirely completed and the workmen made so much noise that the "shanty" seemed decidedly preferable to the new building for the first few months. At the assemblies, which our spacious auditorium per-

mits us to hold, we hear so much of our "beautiful new building" that every time it is mentioned it brings a smile to the face of teachers and pupils alike. But the speakers cannot be blamed for telling us the same story over and over again, and we indeed are grateful to those who gave the building to us.

It is situated on a plateau on 166th Street and Boston Road and is a long building with terminal wings, extending 312 feet along 166th Street. To this building, as an attachment in the rear, an auditorium was added, the effect being to heighten the artistic appearance and to enhance the architectural design. The building itself has five stories and basement. It is constructed of carefully harmonized gray brick with terra-cotta trimmings of the same shade. Passing through the lobby which fronts the elevators (which by the way are not yet running) we enter a great corridor. This corridor runs the whole length of the building, and into it open the principal's offices and a double row of class-rooms. On all floors this is practically the rule of construction, except that in some cases the street ends are given over to gymnasiums or laboratories. The auditorium is directly opposite the center of the corridor and, as far as stage and dressing rooms are concerned, is part of the main structure. The banked seats in the lower floor and gallery, about 1300 in number, are under a separate roof, which is on a level with the second story of the structure.

On the various floors of the building, exclusive of store-rooms and the like, there are seventy-seven rooms, of which forty-six are class-rooms. These rooms are large, well lighted, and have an average seating capacity of forty. Besides these section rooms, there are twelve laboratories, chemical, biological, physiological, physiological, and physical, and three lecture rooms to be used in connection with these. There are also four large study halls and a very spacious library. As the school is for boys and girls there are twin gymnasiums, one at either end of the top floor. Each gymnasium is provided with a full equipment of apparatus, a running track, shower baths, lockers, toilets, and directors' rooms. The basement contains lunch rooms for boys and girls, bicycle rooms, and other conveniences. The engine plant is for the most part located in the sub-basement in the Jackson Avenue end of the building, where advantage was taken of the natural grade.

This costly building was dedicated June 10, 1904. The exercises were held in the auditorium, which was artistically decorated with flags and various coats-of-arms. The stage was also decorated with draperies and palms. Addresses were delivered by

## THE LIBRARY

Hon. Richard H. Adams, Chairman of the Committee on Buildings, Hon. Henry A. Rogers, President of the Board of Education, Hon. Frank L. Babbott, Chairman of the Committee on High Schools, Hon. Thomas F. Delaney, Corporation Counsel, Hon. John H. Eustis, Hon. Louis F. Haffen, President of the Borough of the Bronx, Dr. Nicholas Murray Butler, President of Columbia University, and Dr. William H. Maxwell, City Superintendent of Schools.

Dr. Nicholas Murray Butler delivered a most eloquent address, only parts of which, unfortunately, we are able to print here.

"There are colleges and universities from Japan to Chili of varying excellence, but the free, public, secondary school is the contribution of the American people to modern theory and modern educational practice. Every secondary school in Europe is by its very nature a class school. There the parents of children who leave home to obtain a systematic education are forced to choose

before the youngsters are ten years of age whether they shall take an elementary or secondary course. If, by force of circumstance, they are obliged to decide against that higher training, the doors to which that higher training leads are forever closed to them.

"The free public high school of the United States has developed from below, and instead of overlapping the elementary school it is closely connected with and related to it for the very reason that it appeals not to as few as possible but to as many. The essence of a democratic education is an education of opportunity, an education of continuously opening doors so that the pupil, as he goes on, widens the possibility for service and distinction.

"Training past the elementary school period is of vital importance in a country like ours. There is no more futile insistence than the one continually harped upon in the public press, that if we would teach only reading and writing and arithmetic we need not do anything else. Reading with nothing to read, writing with nothing to write about, and ciphering with nothing to cipher, are of little importance. If our city is to be great and memorable it will be because we succeed in placing it by the side of Jerusalem, Athens, and Rome as an intellectual and spiritual capital."

During the winter of 1903-04 a law was passed combining the Board of Regents and the State Board of Supervision. When the time came for appointing commissioners Dr. Goodwin was suggested and on May 1, 1904, he was appointed Second Assistant Commissioner of Education for New York State. Coming as it did when the school was getting used to its new home, his loss would have been almost irreparable. So, although he accepted the appointment, Dr. Goodwin stayed with us more or less until June, when it was with great sorrow that we parted with him.

On the first day of the following term, Mr. Denbigh was installed as Principal of The Morris High School. Dr. Maxwell presided and, amidst great applause, introduced our new Principal. At this time we lost Dr. Rollins also. With several of our old teachers he went to the Stuyvesant High School and assumed the principalship. Dr. Rollins had been the head of the Physics department and was assistant to Dr. Goodwin. He was also the first president of the High School Teachers' Association, and was always actively interested in matters pertaining to the welfare of teachers.

We will close with a few figures which may interest the reader because they show the enormous growth of our school. When the school opened in 1897, there were 541 pupils on register and the Faculty consisted of 23 teachers. To-day we register 2306 pupils and 82 teachers. In the first graduating class there were

A GYMNASIUM

seven boys and one girl. To-day the ratio is nearly two to one in favor of the girls, and there are 1471 girls and 835 boys in the whole school. In the City Superintendent's Examinations for graduation, Morris stands at the head of the city high schools with almost a clear record. In athletics the name of Morris is known to all. We have indeed made wonderful progress in the past. May we do as well in the future. May the name of Morris always be, as it is now, honored and respected wherever it is mentioned.

L. L. R.  
B. B.

The power of achievement  
is the power of the people

Senior Class Officers: Anthony Boben, Wilfred Medina, Jocelyn Joseph, and Yvonne Haynes

#### SENIOR PRESIDENT'S MESSAGE

As we leave Morris High School with many past experiences and fond memories, we will always recall our high school days, fond memories and experiences that will follow us in life. Looking ahead to the future is something that is a reflection upon the past. Life has so many happenings that it would be ashamed if we chose to just give up and never try to explore ourselves or the world about.

Between these covers lies our only permanent record of four memorial years. When the going gets a little rough, turn to this page and your mind will focus back on your high school days. But it wasn't all fun and games. There were those special teachers we always wanted to have and students we liked. There were also those who stood by us when we had some difficulties, who cared, and forced us to continue. For that we say thank you.

For now the end is near. It is time to close this chapter and open the next book of life. As we go in different directions, we will pursue various occupations. Many of us will go on to college to receive higher education to become more knowledgeable with the real world that awaits us. But it all started here at Morris where we grew from adolescents to mature young adults. We have a lot to be thankful for, rest assured.

I was more than glad to be chosen president of our senior class. And I hope you all feel that you have made a good decision. Do you feel I have served well? Whether I have or haven't, I know I have tried. I would like to thank my fellow officers: Wilfred Medina, Jocelyn Joseph, and Yvonne Haynes, who have assisted me in many ways. We've all done our very best. May we all fulfill our career goals. May we all have the very best in life as we travel through life's highways and byways.

MAY your life be filled  
with all the joy and happiness  
in the world and lots of luck in  
the coming years. God bless  
love  
shortie

**MAY THE FORCE  
BE WITH YOU**

Chester V. Wiggan, Principal

### MEMORIES

What memories have you brought with you as you approach the end of but one phase in your life's journey - graduation from high school.

You should all have had fond memories of days gone by. Had you alone shaped those recollections, perhaps the good ones would have outnumbered the bad. Prisoners we often are, however, of our environment, our homes, even of our own mind. It is within your power to be the manipulator and not the manipulated. In so doing, if done fairly, considerately, and thoughtfully, one has the means to help create memories, good memories, those that one may cherish from the past and perpetuate into the future.

As one delightful memory may sustain you in a time of great adversity, many such memories, of varied scope, will build up your inner strength, nourishing your feeling of self worth.

"Hitch your memory to a star," one composer wrote. You can do no less, for all memories, both happy and sad, can be used to motivate yourself toward positive achievement. The whole individual is ennobled and expanded by the multiple effect of many memories.

Graduation from high school may be said to be one of your most important experiences on the way to becoming a responsible adult. May the memories you have had in Morris High School serve you well as you go out into the broader world of experience. Whatever the memory, let it serve you, goad you, move you and comfort you. Be the master of your ship, keeper of your soul, and retainer of memories that are all "yours."

With patience and foresight most of your memories can have positive value to you and yours. Every memory offers you a greater grasp and appreciation of the myriad changes and challenges on life's journey. While you could well do without many memories, most form the building blocks of individual growth and etch your footprints on the sands of time.

## Ripples in Time

We came to this Galaxy 5.203 billions years ago. The planetary system had recently cooled approximately 51.591 million years prior to our coming. From the left over matter and interstellar dust which had formed during the system's evolution, we created two worlds.

We created an island to be the capital of the world: An electronized society, yet peaceful and the only one of its kind. Atlantis, the legendary Atlantis, the most beautiful city ever created on the face of this planet. Atlantis, a city 50 million years ahead of our time. It has been beneath the waves since 3,275 million years ago. It was decided then that it was time for us to leave.

We had received a signal from a point 14.2 billion light years away sent by one of the many beacons barely within range of today's most powerful telescopes. (Quasars, one of the most powerful objects in the universe!) Beyond comprehension are the amounts of energy released by these objects. One of our world's proudest creations.

As time passed by, we — four of us — aboard the chrono-distortion vehicle had decided to wander towards what will be. Since we were to leave this world forever, four of us asked to visit "what will be," although one of our monitors in mega-space projected the future of this world on our screens. What we viewed was but barbarism throughout the future for eons. And more eons before total peace was to be initiated.

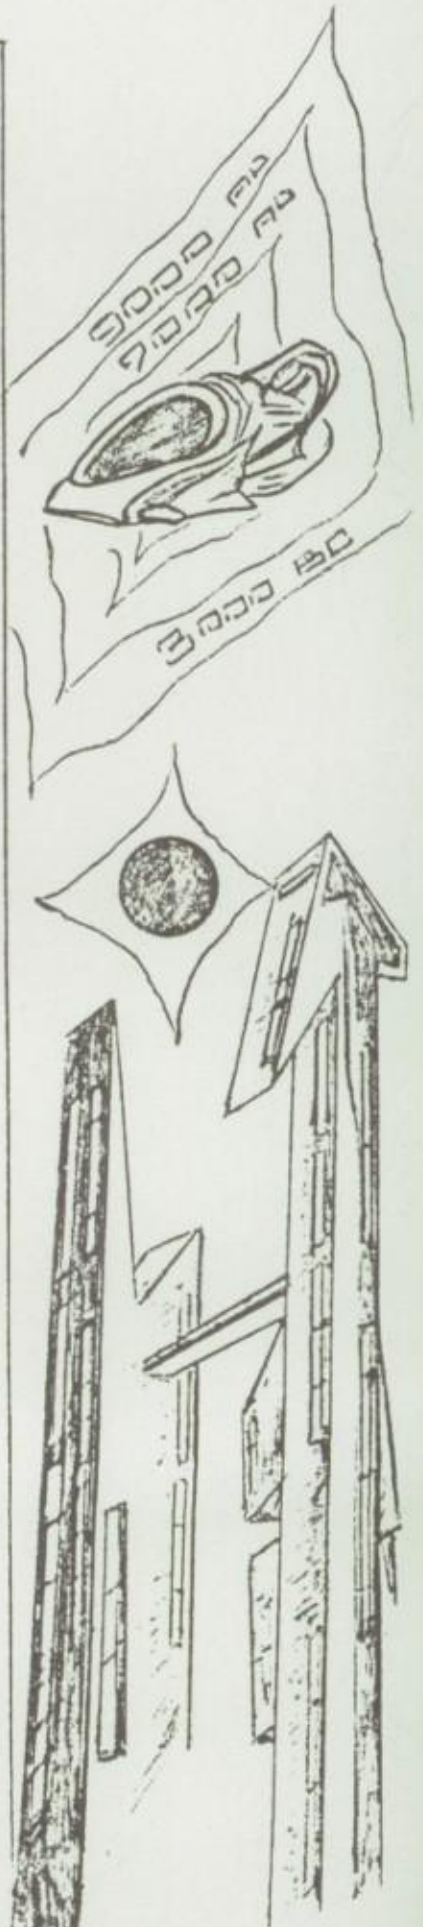

We had given this world a new life to evolve on this surface, and therefore we could not interfere with its evolution.

Upon reaching a point in time, which according to our chronometers was the year 9818 A.D., we decided to return back to our own time, 3,273 million years distant. The society of this century, the 99th, although relatively peaceful, was, however, still primitive to our standards. They had just concluded experiments involving the creation of protostars lasting several months at a time.

As we returned, our unit was caught in some sort of field which prevented us from reaching our goal. This chronological disturbance resulted in our entrapment in this most primitive century. We managed to develop our bodies to the standard form of the beings whom we originally had implanted on this world, and who now ruled it.

This unfortunate accident resulted from the constant violence which had accumulated within this century. Although it had never been proven, it was considered to be theoretically possible. Strong physical effects would occur on a planet with a gravitational field such as this planet's and constant concentration of neutrino-negative particles, and other subatomic particles below the range of 5700 which could never be detected with present day equipment. This would inversely affect the "molecules" of time.

by Pierre Bazin

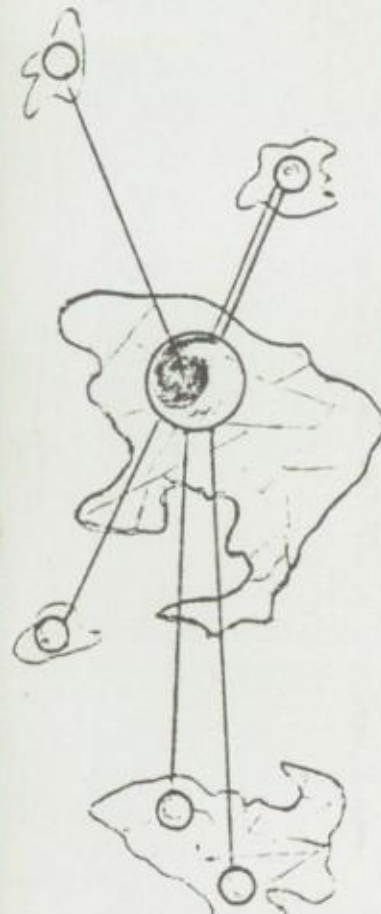

Neutrino-negative particles and other particles of minus 5700, normally occur in one out of ten billion stars, which is why we never had difficulties in time travel.

After being in this century for nearly 58.4 years, two of us decided to give up hope and spend our lives here, in the 20th century. Our time unit cannibalized, we extracted the portable computer. This century was much too primitive for us to find materials for construction of anything which would enable us to escape. (Somewhat similar to a jet pilot constructing any sort of electronic device during the dawn of man two million years ago.)

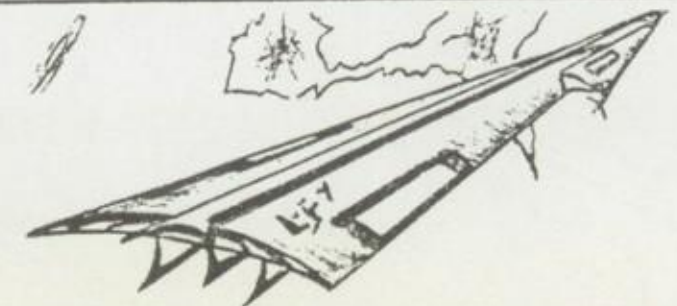

Two of our companions were gone and had destroyed their communications devices as they had no wish to return for they had thought it hopeless. Karina and myself assumed our original identities occasionally so as not to lose our metamorphic powers.

Although we knew this world would finally face extermination, we would not prevent it, for our prime directive forbid us to do so. We travelled occasionally all over the world and instructed in several institutions, both secondary and post secondary. We taught all subject matter; however, we kept it at the level of this society. Usually such topics as astro-physical sciences, physics (preliminary and advanced) and calculus (preliminary, integral, and advanced). Some of the learners seem to comprehend faster than others. Very fascinating that it takes so long for these humans to acquire courses such as these while our own young ones understand anti-particle-conversion physics from birth. Karina and I have converted our computer into not only a computer but a transferral unit — however, not powerful enough for transportation across the stellar distances to our nearest star but 5,000 light years distant.

Karina and I had worked as instructors at a secondary school two years ago, and we decided to take a risk and reveal our true identities. Had they attempted to reveal our identities to any one else, that part of their memory would have been eliminated. However, it was not necessary. Of all the secondary schools we had chosen students and teachers from a particular school to be the first humans to see our world. Several of them had given their word not to reveal our secret, feeling this was the group most to be trusted; we took the chance, and they have kept it since. In return we offered them a voyage to one of our home bases as soon as we were rescued. They all agreed to it. Some even requested that they stay with us.

Four years later, our computer, which we had ordered to keep a constant watch to the far edge of the universe, had finally detected the signal which we had been waiting for. Quarsar 3C373, one of the nearest beacons on this side of the universe, had informed us of our rescue which would be in effect within on Terran year. Although the Quarsar is one billion light years away, with the intra-eliminational warp units of our civilization, any point of the entire universe to infinity is at most on Terran year from any other point in the universe. That is why it would at most take units (15 Terran seconds), for a ship traveling 98° percent maseimum velocity to reach Earth from a point 15.404 billion parsecs distant. We, Karina and I, and several humans were going back home.
